Azalea Networks Announces Agreement with Alliance Security Solutions Pvt. Ltd. to Distribute its Wireless Mesh Network Solution in India

Company's international outreach grows to meet demand for its wireless mesh network routing solution

Milpitas, California – April 8, 2009 – Azalea Networks, a leading innovator in wireless network equipment and technology, today announced an exclusive agreement with Alliance Security Solutions to distribute its innovative wireless routing technology throughout India. Alliance Security is an international distributor of security products and solutions.

As a partner in Azalea's ongoing international expansion of its channel program, Alliance Security will provide Azalea's innovative wireless routing solution to municipalities, governments, and industrial enterprises throughout the Indian region. Anil Kapoor, CEO of Alliance Security said, "Azalea's wireless mesh technology will help us meet the demands of our customers who need a superior wireless mesh solution, particularly those requiring high-quality wireless video surveillance at a low cost of ownership."

Azalea's technology provides municipalities, public safety applications, oil and gas operations, shipping ports, distribution centers, and business and education campuses with the benefits of turn-key wireless solutions while offering the ability to expand, grow or modify a network as needs change. The "intelligent" characteristics of Azalea's network routing technology are inherent in its ability to deliver peer-to-peer routing across the entire network while enabling network management from the host to the client. Azalea's solution also enhances its wireless network's integration with other wireless and wired networks, including the Internet, enterprise networks, or service provider infrastructure, adding flexibility for the wireless network operator.

"Azalea is excited to tap into the rapid growth of broadband wireless and security applications in India and the regions served by Alliance Security," said Rake Jiang, Azalea Vice President and General Manager, International Markets and Global Strategic Alliances. He added, "These areas will truly benefit from the world's only Layer-3 wireless mesh solution that is ideally suited for

security for municipalities, industries, or campuses, as well as transportation applications, last mile access for service providers, and more. The high performance of Azalea's solution combined with the cost-effectiveness of installing wireless systems will allow access to regions previously considered unserviceable due to the high costs of deploying wired networks," he added.

About Azalea Networks

Azalea Networks, headquartered in Silicon Valley, California, (www.azaleanet.com) is the first company to deliver a truly scalable and intelligent wireless broadband mesh infrastructure through the combination of Layer-3 wireless routing technology and a multi-radio system. Azalea's family of mesh and point-to-multipoint routers works with 2.4 GHz for Wi-Fi access, 5 GHz for backhaul connectivity, and 4.9 GHz for public safety use in North America. Azalea's solution is ideal for service providers, government agencies, and industrial enterprises that need the superior performance, scalable capacity, quality of service, seamless mobility and other advantages made possible by true, intelligent network routing.

About Alliance Security Solutions

Alliance Security Solutions Pvt. Ltd , based in Mumbai, India, is a leading distributor in the field of security including industrial, commercial, and residential security products and solutions. Alliance Security provides the full spectrum of services from custom design through installation, services, maintenance and system certification. Founded in 1857, the Casby Group is Alliance Security Solutions' parent company, specializing in ports, logistics, technology, finance and other ventures.
